Package 'snapshot'

February 20, 2015

Type Package
Title Gadget N-body cosmological simulation code snapshot I/O utilities
Version 0.1.2
Date 2013-10-04
Author Aaron Robotham
Maintainer Aaron Robotham <aaron.robotham@uwa.edu.au></aaron.robotham@uwa.edu.au>
Description Functions for reading and writing Gadget N-body snapshots. The Gadget code is popular in astronomy for running N-body / hydrodynamical cosmological and merger simulations. To find out more about Gadget see the main distribution page at www.mpa-garching.mpg.de/gadget/
License GPL-2
Depends R (>= 2.13)
NeedsCompilation no
Repository CRAN

snapshot-package

Gadget N-body cosmological simulation code snapshot I/O utilities ~~ package title ~~

Description

Functions for reading and writing Gadget N-body snapshots. The Gadget code is popular in astronomy for running N-body / hydrodynamical cosmological and merger simulations. To find out more about Gadget see the main distribution page at www.mpa-garching.mpg.de/gadget/

Details

Package:	snapshot
Type:	Package
Version:	0.1.2
Date:	2013-10-04
License:	GPL-2

Author(s)

Aaron Robotham

Maintainer: Aaron Robotham <aaron.robotham@uwa.edu.au>

Examples

```
## Not run:
temp=snapread('snapshot_XXX')
temp$part[,'x']=temp$part[,'x']+10
snapwrite(temp$part,temp$head,'snapshot_XXX_mod')
```

End(Not run)

addhead

Add header information to particle data

Description

Function to add required header information to a Gadget read particle dataframe. This has sensible defaults for a small galaxy merger style simulation

addhead

Usage

```
addhead(part, Npart = 2, Massarr = 0, Time = 0, z = 0, FlagSfr = 0,
FlagFeedback = 0, FlagCooling = 0, BoxSize = 0, OmegaM = 0, OmegaL = 0,
h = 1, FlagAge = 0, FlagMetals = 0, NallHW = 0, flag_entr_ics = 0)
```

Arguments

```
part
```

Strictly speaking 'part' is passed through the function, but to make this a useful object 'part' should be a data.frame containing the main particle level information. Columns required are:

ID	particle ID
Х	x position in units of Mpc
у	y position in units of Mpc
Z	z position in units of Mpc
VX	x velocity in units of km/s
vy	y velocity in units of km/s
VZ	z velocity in units of km/s
Mass	particle mass in units of Msun

Npart	The index on the Npart vector that should contain the particle number, where: gas [1] / collisionless particles [2:6]. The actual value is calculated based on the part data.frame provided with 'part', Nall is also calculated based on this number and not given as an option since the same index as Npart must be used
Massarr	The mass of the particles in the particle index provided to Npart
Time	Time of snapshot in units of km/s and kpc so 1 unit is ~10 Gyrs
Z	Redshift of snapshot
FlagSfr	Star formation turned on/off
FlagFeedback	Feedback turned on/off
FlagCooling	Cooling turned on/off
BoxSize	Size of simulation box edge length in units of kpc
OmegaM	Omega matter of the simulation
OmegaL	Omega lambda of the simulation
h	Hubble constant divided by 100 used in the simulation
FlagAge	Stellar ages on/off
FlagMetals	Stellar metallacities on/off
NallHW	Tell Gadget to use large integers in the particle index provided to Npart- not usually necessary
flag_entr_ics	Entropy for gas on/off

Details

Nall is calculated based on Npart, and therfore it cannot be specified via an input argument. This increases the likelihood that a legal Gadget header will be produced.

Value

partStrictly speaking 'part' is passed through the function, but to make this a useful
object 'part' should be a data.frame containing the main particle level informa-
tion. Assuming 'part' has been given a sensible input, columns provided are:IDparticle ID
xxx position in units of Mpcyy position in units of Mpczz position in units of Mpc

vx x velocity in units of km/s

- vy y velocity in units of km/s
- vz z velocity in units of km/s
- Mass particle mass in units of Msun

head	A list containing various header information as list elements. These are:
Npart	Vector of length 6 containing the number of particles in this snapshot file, where: gas [1] / collisionless particles [2:6]
Massarr	Vector of length 6 containing the particle masses for the respective particle types in Npart
Time	Time of snapshot in units of km/s and kpc so 1 unit is ~10 Gyrs
Z	Redshift of snapshot
FlagSfr	Star formation turned on/off
Nall	Vector of length 6 containing the number of particles in all snapshot files, where:
	gas [1] / collisionless particles [2:6]
FlagFeedback	Feedback turned on/off
FlagCooling	Cooling turned on/off
NumFiles	Number of files per snapshot- usually 1
BoxSize	Size of simulation box edge length in units of kpc
OmegaM	Omega matter of the simulation
OmegaL	Omega lambda of the simulation
h	Hubble constant divided by 100 used in the simulation
FlagAge	Stellar ages on/off
FlagMetals	Stellar metallacities on/off
NallHW	Tell Gadget to use large integers for the respective particle types in Npart
	- not usually necessary
flag_entr_ics	Entropy for gas on/off

Examples

Not run: tempadd=addhead(temp\$part)

End(Not run)

genparam

Generates a Gadget paramter file

Description

Function to generator a legal Gadget paramter setup file. This has a sensible selection of defaults chosen for fairly small (non Cosmological) simulations.

Usage

```
genparam(ParamFile = "galaxy.param", ParamBase = "./HernTest/",
InitCondFile = "./HernStart.gdt", OutputDir = "./HernTest/", EnergyFile = "energy.txt",
InfoFile = "info.txt", TimingsFile = "timings.txt", CpuFile = "cpu.txt",
RestartFile = "restart", SnapshotFileBase = "snapshot",
OutputListFilename = "parameterfiles/output_list.txt", TimeLimitCPU = 36000,
ResubmitOn = 0, ResubmitCommand = "my-scriptfile", ICFormat = 1, SnapFormat = 1,
ComovingIntegrationOn = 0, TypeOfTimestepCriterion = 0, OutputListOn = 0,
PeriodicBoundariesOn = 0, TimeBegin = 0, TimeMax = 0.001, Omega0 = 0, OmegaLambda = 0,
OmegaBaryon = 0, HubbleParam = 1, BoxSize = 0, TimeBetSnapshot = 1e-05,
TimeOfFirstSnapshot = 0, CpuTimeBetRestartFile = 36000, TimeBetStatistics = 0.05,
NumFilesPerSnapshot = 1, NumFilesWrittenInParallel = 1, ErrTolIntAccuracy = 0.025,
CourantFac = 0.3, MaxSizeTimestep = 0.1, MinSizeTimestep = 0, ErrTolTheta = 0.5,
TypeOfOpeningCriterion = 1, ErrTolForceAcc = 0.005, TreeDomainUpdateFrequency = 0.1,
DesNumNgb = 32, MaxNumNgbDeviation = 8, ArtBulkViscConst = 1, InitGasTemp = 0,
MinGasTemp = 100, PartAllocFactor = 3.0, TreeAllocFactor = 4.8, BufferSize = 25,
UnitLength_in_cm = 3.085678e+21, UnitMass_in_g = 1.989e+43,
UnitVelocity_in_cm_per_s = 1e+05, GravityConstantInternal = 0,
MinGasHsmlFractional = 0.25, SofteningGas = 1e-04, SofteningHalo = 1e-04,
SofteningDisk = 0.4, SofteningBulge = 0.8, SofteningStars = 0, SofteningBndry = 0.1,
SofteningGasMaxPhys = 1e-04, SofteningHaloMaxPhys = 1e-04, SofteningDiskMaxPhys = 0.4,
SofteningBulgeMaxPhys = 0.8, SofteningStarsMaxPhys = 0, SofteningBndryMaxPhys = 0.1,
MaxRMSDisplacementFac = 0.2, NFWConcentration = 10, VirialMass = 200, FlatRadius = 1e-05,
DeltaVir = 200, addNFW = FALSE)
```

Arguments

ParamFile	Name for the paramter file
ParamBase	Base file path for the paramter file
InitCondFile	Full path of file containing initial conditions

OutputDir	Base directory in which to put the major Gadget outputs, including snapshots etc
EnergyFile	Name to give energy file
InfoFile	Name to give info file
TimingsFile	Name to give timings file
CpuFile	Name to give CPU file
RestartFile	Name to give restart file
SnapshotFileBa	-
	Base name for snapshots, appended by snapshot number
OutputListFile	
	Name of file containing output times / expansion factors
TimeLimitCPU	Max CPU time to use for Gadget run
ResubmitOn	Flag to tell super-computer there is a resubmit file
ResubmitComman	d Specific to super-computer resubmit command
ICFormat	Initial conditions format: PUT OPTIONS IN TABLE HERE
SnapFormat ComovingIntegr	Snapshot format: PUT OPTIONS IN TABLE HERE
Comovingintegi	Allow for expansion of Universe
TypeOfTimestep	-
	Type of particle integrator- leave at 0
OutputListOn	Flag to tell it to use OutputListFilename as input
PeriodicBounda	
	Flag to turn on/off periodic box boundaries, only needed for large cosmological runs
TimeBegin	Time at the beginning of simulation
TimeMax	Max time to evolve particles to
Omega0	Total energy density
OmegaLambda	Cosmological constant energy density
OmegaBaryon	Baryonic energy density
HubbleParam	Value of H0/100 to be used
BoxSize	Length of box edge (important for cosmological runs only)
TimeBetSnapsho	
	Time between snapshots
TimeOfFirstSna	pshot Time at which to output first snapshot
CpuTimeBetRest	· ·
	How often to output full restart file
TimeBetStatist	-
	Time between energy.txt updates

genparam

NumFilesPerSna	pshot	
	How many files to split snapshots over	
NumFilesWritte		
	How many files to split snapshots over (probably ignore)	
ErrTolIntAccura	-	
	Orbital integration accuracy	
CourantFac	Limit on time step compared to sound crossing time for hydro runs	
MaxSizeTimeste		
	Maximum time step allowed	
MinSizeTimeste		
	Minimum time step allowed	
ErrTolTheta	Controls the accurary of integration (smaller is closer to direct N-body)	
TypeOfOpeningC		
	Barnes-Hut or modified opening criteria (probably ignore)	
	Only used for modified opening criterion (use default)	
TreeDomainUpda		
	How often should a tree be constructed	
DesNumNgb	Number of neighbours to use for denisty estimation in SPH	
MaxNumNgbDevia		
	How much tolerance is allowed when finding neighbours	
ArtBulkViscConst		
	Artificial viscosity term (use default)	
InitGasTemp	Initial gas temperature	
MinGasTemp	Minimum gas temperature allowed in the run	
PartAllocFacto		
- <u>11</u> - 1	Memory buffer per particle per processor	
TreeAllocFacto		
	Memory buffer for tree calculation	
BufferSize	Total memory buffer between processors	
UnitLength_in_cm		
	Assumed IC distance units in cm (default assumes Kpc for input)	
UnitMass_in_g	Assumed mass of provided IC mass units in grams (default assumes 1e10 Msun for input)	
UnitVelocity_i	n_cm_per_s	
	Assumed velocity of provided units in cm/s (default assumes km/s)	
GravityConstan		
	Internal units for g	
MinGasHsmlFrac		
	Minimum multiplicitive factor for smoothing length in hyrdo gas	
SofteningGas	Softening to use for gas particles	
SofteningHalo	Softening to use for halo particles	
SofteningDisk	Softening to use for disk particles	

SofteningBulge	Softening to use for bulge particles	
SofteningStars	Softening to use for star particles	
SofteningBndry	Softening to use for boundary particles	
SofteningGasMax	Phys	
	Physical softening to use for gas particles (only relevant for Cosmo run)	
SofteningHaloMaxPhys		
	Physical softening to use for halo particles (only relevant for Cosmo run)	
SofteningDiskMa	hxPhys	
	Physical softening to use for disk particles (only relevant for Cosmo run)	
SofteningBulgeM	laxPhys	
	Physical softening to use for bulge particles (only relevant for Cosmo run)	
SofteningStarsMaxPhys		
	Physical softening to use for star particles (only relevant for Cosmo run)	
SofteningBndryM	laxPhys	
	Physical softening to use for boundary particles (only relevant for Cosmo run)	
MaxRMSDisplacementFac		
	Biggest distance that a particle can move in a time step	
NFWConcentration		
	Concentration of analytic NFW profile, addNFW must be set to TRUE	
VirialMass	Mass within virial radius of analytic NFW profile, addNFW must be set to TRUE	
FlatRadius	Forces the NFW profile to be cored (not cusped), add NFW must be set to \ensuremath{TRUE}	
DeltaVir	Virial overdensity of NFW profile, addNFW must be set to TRUE	
addNFW	Logic determining whether the analyic NFW specific paramters be added to the setup file? See above	

Value

No value returned, called for the side-effect of writing out a Gadget paramter setup file.

Examples

```
## Not run:
genparam('example.param','Demo/Example1/')
```

End(Not run)

snapread

Description

This function allows the user to read in the standard format Gadget binaries. It keeps the particle information and header information in separate components of a list.

Usage

snapread(file)

Arguments

file

The full path to the Gadget snapshot to be read in.

Value

part	A data.frame co	ntaining the main particle level information.	Columns included
	are:		
	ID	particle ID	

	1
Х	x position in units of Mpc
у	y position in units of Mpc
Z	z position in units of Mpc
VX	x velocity
vy	y velocity
VZ	z velocity
Mass	particle mass in units of Msun

head	A list containing various header information as list elements. These are:
Npart	Vector of length 6 containing the number of particles in this snapshot file, where: gas [1] / collisionless particles [2:6]
Massarr	Vector of length 6 containing the particle masses for the respective particle types in Npart
Time	Time of snapshot in units of km/s and kpc so 1 unit is ~10 Gyrs
Z	Redshift of snapshot
FlagSfr	Star formation turned on/off
Nall	Vector of length 6 containing the number of particles in all snapshot files, where:
	gas [1] / collisionless particles [2:6]
FlagFeedback	Feedback turned on/off
FlagCooling	Cooling turned on/off
NumFiles	Number of files per snapshot- usually 1
BoxSize	Size of simulation box edge length in units of kpc
OmegaM	Omega matter of the simulation

snapwrite

OmegaL	Omega lambda of the simulation
h	Hubble constant divided by 100 used in the simulation
FlagAge	Stellar ages on/off
FlagMetals	Stellar metallacities on/off
NallHW	Tell Gadget to use large integers for the respective particle types in Npart
	- not usually necessary
flag_entr_ics	Entropy for gas on/off

## Not run:
temp=snapread('somepath/snapshot_XXX')
```

End(Not run)

snapwrite

Write in Gadget snapshots

Description

This function allows the user to write standard format Gadget binaries. It can write the particle information and header information, which are provided as separate R objects.

Usage

snapwrite(part, head, file)

Arguments

part

A data.frame containing the main particle level information. Columns required are:

ID	particle ID
х	x position in units of Mpc
у	y position in units of Mpc
Z	z position in units of Mpc
VX	x velocity in units of km/s
vy	y velocity in units of km/s
VZ	z velocity in units of km/s
Mass	particle mass in units of Msun

snapwrite

head	A list containing various header information as list elements. These are:
Npart	Vector of length 6 containing the number of particles in this snapshot file, where: gas [1] / collisionless particles [2:6]
Massarr	Vector of length 6 containing the particle masses for the respective particle types in Npart
Time	Time of snapshot in units of km/s and kpc so 1 unit is ~10 Gyrs
Z	Redshift of snapshot
FlagSfr	Star formation turned on/off
Nall	Vector of length 6 containing the number of particles in all snapshot files, where:
	gas [1] / collisionless particles [2:6]
FlagFeedback	Feedback turned on/off
FlagCooling	Cooling turned on/off
NumFiles	Number of files per snapshot- usually 1
BoxSize	Size of simulation box edge length in units of kpc
OmegaM	Omega matter of the simulation
OmegaL	Omega lambda of the simulation
h	Hubble constant divided by 100 used in the simulation
FlagAge	Stellar ages on/off
FlagMetals	Stellar metallacities on/off
NallHW	Tell Gadget to use large integers for the respective particle types in Npart - not usually necessary
flag_entr_ics	Entropy for gas on/off
£:1.	The full with to the Contest successful to be successful

file The full path to the Gadget snapshot to be created.

Value

No value returned, called for the side-effect of writing out a binary Gadget file.
